Hon. Mayor Scott Voigts  
Hon. Mayor Pro Tem Robert Pequeno  
Hon. Council member Mark Tettemer  
Hon. Council member Doug Cirbo  
Hon. Council member Neeki Moatazedi  
Cc: City Manager Debra Rose

Dear Mayor Voigts, Mayor Pro Tem Pequeno, Council member Tettemer, Council member Cirbo and Council member Moatazedi,

On behalf of Climate Action Campaign, thank you for considering Community Choice Energy (CCE) for Lake Forest. Included in the following documents are informational items for your consideration regarding CCE.

CCE (aka Community Choice Aggregation or CCA) is a local, not-for-profit governmental program that buys and may generate electrical power on behalf of its residents, businesses, and municipal entities. The agency administering the CCE program may also choose to administer energy efficiency programs and other greenhouse gas emission-reducing activities. There are many reasons why a community might want to pursue CCE.

Potential benefits include:

- enhanced consumer choice  
- local control  
- cost savings  
- local economic development  
- expansion of renewable energy portfolios  
- faster progress toward achieving a community’s environmental goals

Community Choice programs are opt-out programs, meaning that once a local government votes to form a Community Choice agency, the constituents of that local government are automatically enrolled, and may opt out if they wish.

Community Choice is only involved in the electrical generation decision-making and has no involvement with transmission and distribution. The electrical utility also continues the metering and billing for customers. The Community Choice agency replaces the line item on the electric bill for “generation.”

**Top 6 Benefits of Staying in the OC Power Authority**

1. **CONSUMER CHOICE:** Lake Forest families want and deserve a choice of energy providers. CCE creates competition in the energy marketplace that encourages greater innovation and improved pricing.
2. **COST SAVINGS:** All existing CCEs provide a rate savings compared to current SCE rates (see figure 14 below from Lake Forest feasibility study). The Lake Forest feasibility study
confirms that OC Power Authority (OCPA) rate savings will range between 0.5-2%. Rate savings expected to increase starting 2026-2030 as SCE contracts expire, load departure increases, and wholesale power costs shift.

Figure 14. CCA Residential Rate Savings as of January 13, 20201 (lowest cost CCA offering versus standard utility rate)

3. **CLEANER ENERGY**: CCE programs provide a higher mix of more affordable clean energy sources, helping Lake Forest meet or exceed state energy goals. Wholesale renewable solar energy costs are approaching $0.02/kWh compared to SCE’s on-peak residential rates of $0.35/kWh or more.

4. **COMMUNITY CONTROL**: OCPA puts Lake Forest families in charge of their energy future through local decision-making on rates, programs, and policies.

5. **COMMUNITY BENEFIT**: CCE programs are centered on community benefits. CCE can fund local power resiliency programs such as microgrids, which reduce the risk of wildfires. A microgrid is a self-sufficient, energy-generating distribution and control system which puts communities on the path to self-reliance. It integrates the source of the electricity with consumption loads, such as homes and businesses, in a connected system, allowing the community to operate in isolation when the utility-scale electricity supply is interrupted. Cost and regulations are among the major obstacles to the adoption of microgrids, but CCEs are a way to overcome both those obstacles. Here is a roundup of current microgrid/wildfire/power resilience-related CCE programs.
6. **MAXIMIZE ECONOMIES OF SCALE:** The economies of scale for CCE in California are very important. A single-city CCE risks Lake Forest's General Fund and presents considerable costs and effort for staff. OCPA will also be better-positioned to negotiate with power providers for electricity at lower rates than Lake Forest could if it tried to create its own CCE program.

Here is additional information to help answer any questions you may have about the details of your agenda packet.

**Resident survey:** The results of the Lake Forest resident survey show that 85% of residents would be likely to buy electricity “from the city” rather than SCE if the city’s rates were lower than SCE’s. 72% of residents said they would be likely to choose to purchase electricity from the city rather than SCE if the city offered more renewable sources. MRW’s feasibility study found that OCPA rates will be lower than SCE’s, with savings increasing after the first few years, and that OCPA will be able to offer electricity sourced from more renewables than SCE.

**Outreach:** Climate Action Campaign has conducted community outreach to Lake Forest residents and received overwhelmingly positive feedback that Lake Forest residents want CCE. Public comments submitted by Lake Forest residents for previous CCE discussions and tonight's item should indicate that the community has a strong interest in CCE.

**Founding Member status:** If Lake Forest City Council votes to exit the OCPA, it will miss out on the opportunity to be a Founding OCPA member. Additional cities are not expected to be added until later in 2021. Lake Forest should retain its status as a founding member on the JPA board so it can shape discussions on exit clauses should the city decide to leave later as well as other matters.

**Loan Repayment:** Irvine’s most recent pro forma analysis for OCPA shows that projected net revenue and the loan repayment schedule is contingent on the number of cities that join over time. OCPA has received inquiries from numerous OC cities not currently participating in OCPA regarding membership. The addition of new cities this year would further expedite loan repayment, rate savings and program benefits.
Employee Benefits Provisions: No CCA has formal retirement pension obligations with their staff. On Page 8, Section 3, Clause 16 (3.16), the draft agreement has the language referring to this. If Lake Forest stays in OCPA, then Lake Forest staff would not be employees of the OCPA. Page 125 (screenshot below) of the San Diego Community Power 10.22.2020 Board Packet, shows a CCA Benefits for San Diego Community Power, Clean Power Alliance (LA/Ventura), Monterey Bay and East Bay Community Energy. No CCAs have retirement pension agreements. They offer 401Ks or other plans. The OCPA is expected to have less than 10 employees. Hardly an expansive bureaucracy.

**Orange County Energy Authority Projected Net Revenue**

*After startup costs and loans are repaid and the CCE builds an operating reserve, the JPA Board of Directors can direct net revenue to sustainability programs such as electric vehicle charging stations, rooftop solar rebates, battery storage, net energy metering, and/or to stabilize electricity prices in participating cities.*

**Consumer Choice:** With CCE, the customer has choices every step of the way. The customer can opt-out any time, and go back to SCE and their higher rates. The customer can choose their energy mix of 34% renewable, 50% renewable or 100% renewable energy. Customers will be notified 60 days and 30 days before OCPA launch and 30 and 60 days after launch, and will be able to opt out of OCPA at any time.

**Energy Prices:** Renewable energy is cheaper than oil and gas. Unsubsidized renewable energy is now most frequently the cheapest source of energy generation - Forbes [https://www.forbes.com/sites/jamesellsmoor/2019/06/15/renewable-energy-is-now-the-cheapest-option-even-without-subsidies/?sh=161d15c15a6b](https://www.forbes.com/sites/jamesellsmoor/2019/06/15/renewable-energy-is-now-the-cheapest-option-even-without-subsidies/?sh=161d15c15a6b)

**Conflicts of Interests:** City employees will have nothing to do with OCPA. OCPA will be required to issue RFPs like any city, and will have a fiduciary duty to select cost-competitive proposals.

**Renewable Energy Laws:** The State legislature backs CCAs as the primary pathway toward 100% renewable portfolio standard goals. SCE plans to reach 80% renewable by 2045. CCEs are more nimble and can transition to 100% renewable energy sooner than 2030.

**Long Term Energy Contracts & Impacts to General Fund:** The City Council does not sign any contracts. The OCPA Board will approve long-term energy contracts that the OCPA CEO will negotiate. OCPA's decisions do not impact any member city's General Fund account whatsoever.

More information can be found at the California Public Utilities Commission [www.CPUC.ca.gov](http://www.CPUC.ca.gov), and additional resources may be found at: [www.CAL-CCA.org](http://www.CAL-CCA.org), [www.cleanpowerexchange.org](http://www.cleanpowerexchange.org), and [www.occleanpower.org](http://www.occleanpower.org).

Thank you for your consideration. I and my team at Climate Action Campaign are available to assist you in any way.

Sincerely,

**Ayn Craciun**
